

Accent Floor Heating MetalFIX

Part Code: Metal Fixing

OVERVIEW

MetalFIX is a galvanized fixing strip, designed to aid fixing of loose cable to the subfloor during installation. The fixing strip has inbuilt hooks, which can give centers between 15-30mm.

The strip should be placed perpendicular to the heating cable and be fixed to the subfloor with either nails, double sided fixing tape or if installed around a tank, it should be welded or secured with metal banding. It is important that there is no movement in the strip.

The MetalFIX should be installed evenly across the subfloor surface at intervals of 0.75 – 1m, to ensure that the cable is firmly in place.

When using in partnership with floor heating, it should be placed around the edge of the room, with a minimum gap of 100mm between the strip and wall.

KEY FEATURES

- Available in 10 m lengths
- Fixing hooks every 15-30mm
- Available from stock
- Can be fixed on any surface
- Ideal for making loose cable installations
